EasyVote

Wireless voting system

Bringing interactivity to your meetings, training, teaching or presentations has never been easier

Interact with your audience in real-time

cut out laborious and costly processes of manual re-entry

speed up collective decisions

allow the trainer to evaluate in real time

EasyVOTE is a wireless response system that enhances interactivity in conferences, meetings, member elections ... or animate your booth or your classroom

EasyVOTE allows a large number of people (up to 3750 per site) to deliver their views quickly and anonymously (or not) to a wide range of questions on an infinite number of subjects

No more paper, real-time answers, displays them back to the audience in colorful, easy to read charts, or keep the data confidential

Encourage participation, improve comprehension, increase retention, add excitement, enthusiasm, and fun, too!

With over 600,000 keypads sold, Reply® has been recognized as the top-selling and most widely used wireless (RF) audience response technology in the world

EasyVote is a product of OneTec

OneTec is a close and committed IT company based in Brussels, offering top-quality services in the fields of Business Software Development, Internet Technology, Systems & Networks Infrastructure and IT Solutions for Events
